Chapter 1

Directory Hierarchy

1.1 Directories

ASCII	5
ASCII.ino	7

Chapter 2

File Index

2.1 File List

Here is a list of all files with brief descriptions:

ASCII/ ASCII.ino	7
----------------------------------	---

Chapter 3

Directory Documentation

3.1 ASCII Directory Reference

Files

- file [ASCII.ino](#)

Chapter 4

File Documentation

4.1 ASCII/ASCII.ino File Reference

```
#include <Arduino.h>
```

Functions

- void **setRGB** (int r, int g, int b)
Set the RGB LED color using PWM.
- void **setup** ()
Arduino setup function.
- void **loop** ()
Arduino main loop.

Variables

RGB PWM pins

PWM pins used to drive the RGB LED channels.

- const uint8_t **pinR** = 9
PWM pin for the red channel.
- const uint8_t **pinG** = 10
PWM pin for the green channel.
- const uint8_t **pinB** = 11
PWM pin for the blue channel.

4.1.1 Function Documentation

4.1.1.1 **loop()**

```
void loop ()
```

Arduino main loop.

When serial data is available: 1) Read three integers using Serial.parseInt() -> r, g, b 2) Remove leftover newline/\r carriage return characters from the buffer 3) Print parsed values for debugging 4) Update the RGB LED using setRGB(r, g, b)

Note

Serial.parseInt() skips non-numeric characters (like commas), so input formats like 200,100,40 or 200 100 40 both work.

4.1.1.2 setRGB()

```
void setRGB (
    int r,
    int g,
    int b)
```

Set the RGB LED color using PWM.

Ensures each channel is clamped to the valid PWM range (0..255), then writes the values using analogWrite(). For a common-cathode RGB LED:

- 0 = off
- 255 = full brightness

Parameters

<i>r</i>	Red intensity (0..255)
<i>g</i>	Green intensity (0..255)
<i>b</i>	Blue intensity (0..255)

4.1.1.3 setup()

```
void setup ()
```

Arduino setup function.

Initializes Serial communication and sets RGB pins as OUTPUT. Turns the LED off initially by setting (0,0,0).

4.1.2 Variable Documentation

4.1.2.1 pinB

```
const uint8_t pinB = 11
```

PWM pin for the blue channel.

4.1.2.2 pinG

```
const uint8_t pinG = 10
```

PWM pin for the green channel.

4.1.2.3 pinR

```
const uint8_t pinR = 9
```

PWM pin for the red channel.
